

**Use of block copolymers bearing phosphate and/or
phosphonate functions as adhesion promoters or as
protecting agents against the corrosion of a metallic
surface**

5

Abstract of the Disclosure

The invention relates to the use of a block copolymer
having at least one block that comprises phosphate
10 and/or phosphonate functions, as an additive for film-
forming compositions, such as paint, latex or mastic
which is optionally siliconised in order to ensure or
promote the adhesion of the aforementioned compositions
on a metallic surface or to protect said metallic
15 surface against corrosion. The invention also relates
to film-forming compositions comprising the above-
mentioned block copolymers.
